

HOUSES OF WORSHIP

COMMUNITY PROFESSIONAL LOUDSPEAKERS WHEN YOU WANT THE BEST FOR YOUR PLACE OF WORSHIP

The main purpose of any House of Worship audio system is to project intelligible speech to the congregation. An equally important task for many such systems is providing high quality reproduction of choral groups, live instruments, and recorded music. The most important purchase decision for fulfilling these functions is the choice of loudspeakers.

Community has long experience in manufacturing professional loudspeaker systems for Houses of Worship that excel at reproduction of both speech and music. Community loudspeakers have been specified and installed in hundreds of worship systems worldwide.

Because each Worship space and each congregation has different needs, many important factors must be considered to determine the best choice of loudspeakers. These include:

-  Room shape, acoustical character, and room aesthetics
-  Size and physical disposition of the congregation in the room
-  Type of musical programs and the volume level needed for speech and musical programs
-  Provisions available for mounting loudspeaker systems
-  Available budget
-  Plans for possible future expansion.

Given these factors, the "perfect" loudspeaker for all situations simply does not exist. What has worked for the congregation down the street may be disastrous for your audio needs. That's why Community has designed and manufactures several different product lines, and models within each line, in order to meet the large variety of demands, conditions, and budgets within the Worship community.

Community Professional Loudspeakers offers a wide range of loudspeaker systems that are eminently suited to House of Worship installations. They include:

CBA & CBS

CBA & CBS loudspeaker systems are designed to provide sound reinforcement of full, high-power, musical programs for the very largest of congregations - those of several thousand or more. This series is also available in a touring version for portable use to address crowds of up to 100,000 in large arenas and stadiums.

SLS/SBS - The Solutions Series

This series of loudspeakers is noted for its superb performance for both speech-only and music reproduction. This singular range of small to large systems are available with matching subwoofers for full-range music. Community Solutions provides extremely articulate midrange for highest intelligibility and excellent focusing of sound for deep projection in rooms where acoustics are difficult for good speech. Solutions Series models are available painted black or painted white with matching white grille coverings.

CPL

For smaller houses of worship, the CPL series offers full-frequency, professional performance at a more modest cost. A number of models are available to allow the exact choice to fit the particular situation, including supplementary coverage in larger systems. CPL's highly efficient designs provide good sound control for speech and wide range output for music. They have built-in variable settings with the versatility and adaptability to meet the simplest or more sophisticated applications. CPL systems are housed in elegantly simple, low profile enclosures and are available painted white, black, or unfinished to match or complement virtually any décor.

CSV

The CSV series is engineered to provide the absolute best value at lowest cost without compromising performance. Speech and full-range music are reproduced fully, naturally, and cleanly even in situations where higher volume levels are required. Community CSV loudspeakers are furnished in simulated oak laminate, providing an elegant appearance.

In Conclusion...

No matter what the size of your new sound system, your first and best action should be a call to a professional sound designer and installer. Ask to hear other worship systems that they have designed. Ask to hear a comparison demonstration of several different models of loudspeakers in your room or in a space that is similar to yours. And make sure that Community systems are included. We think you will agree that Community has the solution for the best sound to fit your particular needs and budget.

All Community loudspeakers have Five Year transferable warranties, built-in dynamic protection* from excessive power, and strong, built-in mounting points to facilitate installation.

*CBA & CBS uses external, electronic power limiting.
